

**AMENDMENT TO THE SPECIFICATION:**

I. Please replace the original Abstract with the following language:

-- ABSTRACT

An imaging unit for a printing form cylinder of a printing press, the printing form cylinder having a width, the imaging unit comprising: an imagining unit comprising, in combination: a cleaning unit, a coating unit positioned below said cleaning unit, an image creating unit positioned below said coating unit, and an image developing unit positioned below said image creating unit. Each of the cleaning, coating, image creating and image developing units traverse over the width of the printing form cylinder thereby rendering reverse movement without active operation to the other side of the printing form cylinder unnecessary. --

II. Please amend the specification as follows:

On page 1, line 13, please change the term "changes" to -- change --;

On page 2, line 10, please change "in traversing imaging unit" to -- in a traversing imaging unit -- ;

On page 3, line 12, please change the reference numeral "6" to -- 5 --; and

On page 3, lines 15 – 16, please add reference numeral -- 7 -- after "arrow".
